

Manufacturing Computer Solutions Shortlist 2005

Renting ERP is attractive

If you thought renting an ERP system meant having to compromise either on functionality or service levels, or even flexibility, better think again.

Rent IT's ERP offering, for example, has just moved up a notch with a complete rebuild to 123mrp.Net v5 – as a true .Net application.

123mrp.Net suits a wide variety of manufacturing types and sectors, and the interface has been considerably reworked. Rent IT's '123 simplicity' means that most screens employ a three-step tab process, guiding all tasks.

Says Guy Amoroso, managing director: "We have engineered out all of the superfluous supplier services, such as extensive training and consultancy. 123mrp.Net only requires five days of training."
